

Link-4

Why install a Link-4 ?

The Link-4 is a gateway between HoistNet devices (such as Liftlog and AccessPack) and the cloud. This allows asset owners to monitor the usage of their equipment in real-time as well as utilise a variety of web-based reports and alerts.

A Link-4 can maintain connections with up to 99 devices that are located up to 200m away (actual range is dependent on conditions), so normally only 1 or two units are required per site. The devices come preconfigured and are available for a number of countries worldwide including Australia and the USA.

Technical Details

PHYSICAL

Dimensions (mm): 198x132x38

Weight: 200g

Mounting: Adhesive Velcro

Operating temperature range (°C): -25 to 85

ELECTRICAL

Supply Voltage: 5VDC

Max power consumption: 5W

HoistNet

About CASWA

CASWA is an Australian company that designs electronics and software for collecting, analysing and disseminating data to help asset owners and maintainers make better business decisions. CASWA also manufactures and distributes the Sole Digital range of asset management products at a facility in Perth, Western Australia, many of which have been developed specifically to support the crane industry.
